

SINGLE PLATE CHECK VALVES

MATERIAL SPECIFICATIONS

Body and Disk Cast iron I.S. 210 FG 200
Cast Steel ASTM A-216 Grade WCB
Cast Stainless Steel CF8 & CF8M

Seat and Body 'O' rings Nitrile, EPDM, Viton, Silicon, PTFE

Other materials available on special request

INSTALLATION

The short face to face dimensions and the low weight guarantee a simple and space saving installation between the bolts of the connecting flanges.

Flange sealing is obtained by O-rings.

APPLICATION:

Water, Air, Oil, Gas, Steam or any other fluid.

DESIGN FEATURE:

The design has distinct advantages over conventional swing check valves.

- Structurally sound
- Hydraulically engineered
- Stronger, lighter and smaller in size
- It weighs 1/8th weight of conventional valve
- Flexible installation: Can be installed in horizontal or in vertical line, without any special pipe support.
- Water Hammer and slamming almost eliminated.
- Lower pressure drop, hence lower energy loss.
- The light weight and short face to face dimensions of valve make it easy to install between standard gasket and line flanges.

SIZES:

40mm to 600mm

NB mm	A	B	C	Weight kg.
40	86	17	25	0.5
50	110	17	32	0.9
